

Instructions for Providing a Duplicate Set of Illustrations:

We are looking for one document that will show us, *for each figure*, the image(s), the caption(s), and the electronic filename(s) all together. This way, no one at the Press will have to search through your manuscript to find the figures and open all your image files to match a printout of “Figure 5.3.3” with a filename like “schrcrv.eps,” or wonder whether Figure 3.2 is composed of one image file or two.

However, the nature of the duplicate illustrations document may depend on your software, your ability, and/or the extent of your patience.

Instructions:

1. Please create a .tex document that contains only the figures as they appear in your main .tex file(s), including captions, sizing, multiple parts, etc.
2. Please include filenames and extensions that will be visible in the output. If the image is generated with TeX code, put “from TeX code” instead of the filename.
3. Please submit an Adobe .pdf file.
4. Please ensure that your page size is letter size (8.5in x 11in).

Please check your software settings (dvi2pdf, ps2pdf, pdflatex, etc.) so that you do not produce an A4 .pdf document by accident.

Please note:

- This is a *duplicate* set of illustrations. Please *do not* remove the illustrations from the manuscripts for copyediting and design; please *do* submit your electronic illustration files.
- It does not matter whether figure numbering in this document matches figure numbering in your manuscript. In fact, the figure numbers are almost certain to be completely different. What is important is that we know which filenames match which images.
- If you can produce a document that lists a partial matching, such as figure number, page number, and caption with filename (but no image), or image and filename (but no caption), that’s better than nothing.
- Rather than create a duplicate set of illustrations, you could rename your figure files according to the figure number given to the figure in the manuscript. (This is what authors of word-processed manuscripts are asked to do.) Filenames of this type should be of the form “figure3-4.eps,” which would be the name for the fourth figure in chapter three.
