New Paperback
Steven Shapin and Simon Schaffer, Winners of the 2005 Erasmus Prize, Praemium Erasmianum Foundation

With a new introduction by the authors

Leviathan and the Air-Pump
Hobbes, Boyle, and the Experimental Life
Steven Shapin & Simon Schaffer

Praise for Princeton’s previous editions:

“Leviathan and the Air-Pump is the most influential text in our field since Thomas Kuhn’s Structure of Scientific Revolutions.”
—James Secord, Isis

“This is simply one of the most original, enjoyable, and important books published in the history of science in recent years.”
—Owen Hannaway, Technology and Culture

“Shapin and Schaffer have written one of the very first lives of an instrument…. They [also] had the wit … to take virtually the first piece of apparatus of the new laboratory science, and so have given us an unparalleled vignette of the birth pangs of a new style of reasoning.”
—Ian Hacking, British Journal for the History of Science

Leviathan and the Air-Pump examines the conflicts over the value and propriety of experimental methods between two major seventeenth-century thinkers: Thomas Hobbes, author of the political treatise Leviathan and vehement critic of systematic experimentation in natural philosophy, and Robert Boyle, mechanical philosopher and owner of the newly invented air-pump. The issues at stake in their disputes ranged from the physical integrity of the air-pump to the intellectual integrity of the knowledge it might yield.

Steven Shapin and Simon Schaffer use the confrontation between Hobbes and Boyle as a way of understanding what was at stake in the early history of scientific experimentation. They describe the protagonists’ divergent views of natural knowledge, and situate the Hobbes-Boyle disputes within contemporary debates over the role of intellectuals in public life and the problems of social order and assent in Restoration England. In a new introduction, the authors describe how science and its social context were understood when this book was first published, and how the study of the history of science has changed since then.

2011. 416 pages. 15 halftones. 7 line illus.
Pa: 978-0-691-15020-8 $29.95 | £20.95

Steven Shapin is the Franklin L. Ford Professor of the History of Science at Harvard University. Simon Schaffer is professor of history of science at the University of Cambridge.

Princeton Global Science (http://princetonglobalscience.org) is a new initiative of Princeton University Press highlighting the work of our authors and their books in addressing the great scientific and technological issues alive in the world today.

The Poison King
The Life and Legend of Mithradates, Rome’s Deadliest Enemy
Adrienne Mayor

“A wonderful reading experience, as bracing as a tonic…. It’s drenched in imaginative violence and disaster, but it also wears the blameless vestments of culture and antiquity.”
—Carolyn See, Washington Post

“Mithradates should be a household name alongside his fellow rebels Hannibal, Cleopatra, Spartacus, and Attila. This detailed, juicy, entertaining, yet painstaking work of superb scholarship should finally give Mithradates the recognition he deserves.”
—Margaret George, author of Helen of Troy: A Novel

In this richly illustrated book, Adrienne Mayor combines a storyteller’s gifts with the most recent archaeological and scientific discoveries to tell the tale of Mithradates as it has never been told before.

Forthcoming
With a foreword by Philip J. Davis
Fascinating Mathematical People
Interviews and Memoirs
Edited by Donald J. Albers & Gerald L. Alexanderson

“Fascinating Mathematical People is a wonderfully varied collection. We meet brilliantly successful teachers, authors, a dentist, and two Fields Medal–winning Scandinavians. Some came from academic or intellectual families, another from a blazing-hot glass factory in Pennsylvania, and still another from an ancient and storied English aristocratic background. All of them had surprising side paths and detours on their way to mathematical success.”
—Reuben Hersh, coauthor of Loving and Hating Mathematics

Fascinating Mathematical People is a collection of informal interviews and memoirs of sixteen prominent members of the mathematical community of the twentieth century, many still active. The candid portraits collected here demonstrate that while these men and women vary widely in terms of their backgrounds, life stories, and worldviews, they all share a deep and abiding sense of wonder about mathematics.

Reinventing Discovery
The New Era of Networked Science
Michael Nielsen

“Science has always been a contact sport; the interaction of many minds is the engine of the discipline. Michael Nielsen has given us an unparalleled account of how new tools for collaboration are transforming scientific practice. Reinventing Discovery doesn’t just help us understand how the sciences are changing, it shows us how we can participate in the change.”
—Clay Shirky, author of Here Comes Everybody and Cognitive Surplus

In Reinventing Discovery, Michael Nielsen argues that we are living at the dawn of the most dramatic change in science in more than 300 years. This change is being driven by powerful new cognitive tools, enabled by the internet, which are greatly accelerating scientific discovery. There are many books about how the internet is changing business or the workplace or government. But this is the first book about something much more fundamental: how the internet is transforming the nature of our collective intelligence and how we understand the world.

This is a book for anyone who wants to understand how the online world is revolutionizing scientific discovery today—and why the revolution is just beginning.

Michael Nielsen is one of the pioneers of quantum computing. He is an essayist, speaker, and advocate of open science.

NEW

Discoverers of the Universe
William and Caroline Herschel
Michael Hoskin

“In this joint biography, written with the cooperation of the Herschel family, historian of astronomy Michael Hoskin portrays the siblings’ shared passion for the night sky, and the triumphs and pitfalls of their work. Using an amateur telescope, the pair charted thousands of stars and nebulae in catalogues that are still used today.”
—Nature

Discoverers of the Universe tells the gripping story of William Herschel, the brilliant, fiercely ambitious, emotionally complex musician and composer who became court astronomer to Britain’s King George III, and of William’s sister, Caroline, who assisted him in his observations of the night sky and became an accomplished astronomer in her own right. Together, they transformed our view of the universe from the unchanging, mechanical creation of Newton’s clockmaker god to the ever-evolving, incredibly dynamic cosmos that it truly is.

Michael Hoskin is fellow of Churchill College at the University of Cambridge, where he lectured in the history of astronomy from 1959 until his retirement in 1988, and founding editor of the Journal for the History of Astronomy.
NEW

How Old Is the Universe?
David A. Weintraub

“Astronomer David Weintraub explains … how we know that the Universe is 13.7 billion years old, a finding that has had an impact on science, philosophy and religion. By looking at the various ways in which the age of the cosmos has been established over the centuries—from the lifecycles and pulsations of stars to galactic structures and cosmology—he reveals the process of scientific enquiry and shows how astronomers gather evidence to grapple with deep questions.”
—Nature

“If you really want to know the age of the universe, then you too have to start from scratch. How Old is the Universe? places the question in its proper historical context and explains what has gone into answering it.”
—Kulvinder Singh Chadha, Physics World

Astronomers have determined that our universe is 13.7 billion years old. How exactly did they come to this precise conclusion? How Old Is the Universe? tells the incredible story of how astronomers solved one of the most compelling mysteries in science and, along the way, introduces readers to fundamental concepts and cutting-edge advances in modern astronomy.

David A. Weintraub is professor of astronomy at Vanderbilt University.

NEW

The Little Book of String Theory
Steven S. Gubser

“The Little Book of String Theory by theoretical physicist Steven Gubser puts into words the abstract maths of some of the most challenging areas of physics, from energy and quantum mechanics to branes, supersymmetry and multiple dimensions.”
—Nature

“With Gubser as our guide science starts to seem less like the exclusive domain of the brainy, and more like a window into the universe that is open for everyone.”
—Glenn Dallas, San Francisco Book Review

The Little Book of String Theory offers a short, accessible, and entertaining introduction to one of the most talked-about areas of physics today. String theory has been called the “theory of everything.” It seeks to describe all the fundamental forces of nature. It encompasses gravity and quantum mechanics in one unifying theory. But it is unproven and fraught with controversy. After reading this book, you’ll be able to draw your own conclusions about string theory.

The Little Book of String Theory is the essential, most up-to-date beginner’s guide to this elegant, multidimensional field of physics.

Steven S. Gubser is professor of physics at Princeton University.

NEW

Divine Machines
Leibniz and the Sciences of Life
Justin E. H. Smith

“With this book, Justin Smith turns the world of Leibniz scholarship upside down. Others have argued for the centrality of Leibniz’s views on language and logic, or on physics and mathematics, or on theology, but Smith shows us how to read this key figure in the history of modern thought through his biology. This learned, original, and exciting book is obligatory reading for anyone interested in the origins of modern philosophy.”
—Daniel Garber, Princeton University

Though it did not yet exist as a discrete field of scientific inquiry, biology was at the heart of many of the most important debates in seventeenth-century philosophy. Nowhere is this more apparent than in the work of G. W. Leibniz. In Divine Machines, Justin Smith offers the first in-depth examination of Leibniz’s deep and complex engagement with the empirical life sciences of his day, in areas as diverse as medicine, physiology, taxonomy, generation theory, and paleontology. He shows how these wide-ranging pursuits were not only central to Leibniz’s philosophical interests, but often provided the insights that led to some of his best-known philosophical doctrines.

Justin E. H. Smith is associate professor of philosophy at Concordia University in Montreal.

NEW

The Brain and the Meaning of Life
Paul Thagard

“[Thagard] offers a tightly reasoned, often humorous, and original contribution to the emerging practice of applying science to areas heretofore the province of philosophers, theologians, ethicists, and politicians: What is reality and how can we know it? Are mind and brain one or two? What is the source of the sense of self? What is love? What is the difference between right and wrong, and how can we know it? What is the most legitimate form of government? What is the meaning of life, and how can we find happiness in it? Thagard employs the latest tools and findings of science in his attempts to answer these (and additional) questions.”
—Michael Shermer, Science

Why is life worth living? What makes actions right or wrong? What is reality and how do we know it? The Brain and the Meaning of Life draws on research in philosophy, psychology, and neuroscience to answer some of the most pressing questions about life’s nature and value.

Paul Thagard is professor of philosophy, psychology, and computer science at the University of Waterloo, Canada.

Creating the Market University
How Academic Science Became an Economic Engine
Elizabeth Popp Berman

American universities today serve as economic engines, performing the scientific research that will create new industries, drive economic growth, and keep the United States globally competitive. But only a few decades ago, these same universities self-consciously held themselves apart from the world of commerce. Creating the Market University is the first book to systematically examine why academic science made such a dramatic move toward the market. Drawing on extensive historical research, Elizabeth Popp Berman shows how the government— influenced by the argument that innovation drives the economy—brought about this transformation.

Elizabeth Popp Berman is assistant professor of sociology at the University at Albany, State University of New York.

February 2012. 264 pages. 6 line illus. 2 tables.
Cl: 978-0-691-14708-6 $35.00 | £24.95
NEW PAPERBACK—THIRD EDITION

The Crest of the Peacock
Non-European Roots of Mathematics
George Gheverghese Joseph

Praise for Princeton’s previous editions:

“Enthralling…. After reading it, we cannot see
the past in the same comforting haze of age-old
stories, faithfully and uncritically retold from
teacher to pupil down the years…. Invaluable for
mathematics teachers at all levels.”

—New Scientist

“What is valuable here is the unified approach
that Joseph brings … and the non-technical clar-
ity that the attempt to reorder historical priorities
and educate his readers out of their European
prejudices requires.”

—Times Literary Supplement

George Gheverghese Joseph was born in
Kerala, India, grew up in Mombasa, Kenya,
and completed his degrees in England. He has
worked in various occupations that have taken
him to places all over the world, including East
and Central Africa, India, Papua New Guinea, and
South East Asia.

The Zodiac of Paris
How an Improbable Controversy over
an Ancient Egyptian Artifact Provoked
a Modern Debate between Religion
and Science
Jed Z. Buchwald & Diane Greco Josefowicz

“This book presents important and fascinating
themes, and skillfully combines them. The birth
of Egyptology, the French Revolution, the rule
of Napoleon, the age of the Earth, and our
knowledge of the stars all feature in its chapters.
Above all there is the ever-shifting relationship
between science, religion, and atheism. I
discovered something new on every page.”

—John Ray, University of Cambridge

The Dendera zodiac—an ancient bas-relief
temple ceiling adorned with mysterious symbols
of the stars and planets—was first discovered by
the French during Napoleon’s campaign in Egypt,
and quickly provoked a controversy between
scientists and theologians. Brought to Paris in
1821 and ultimately installed in the Louvre,
where it can still be seen today, the zodiac
appeared to depict the nighttime sky from a time
predating the Biblical creation, and therefore cast
doubt on religious truth. The Zodiac of Paris tells
the story of this incredible archeological find and
its unlikely role in the fierce disputes over science
and faith in Napoleonic and Restoration France.

Jed Z. Buchwald is the Doris and Henry Dreyfuss
Professor of History at the California Institute of
Technology. Diane Greco Josefowicz teaches in
the writing program at Boston University.

2010. 448 pages. 8 page color section. 73 halftones.

The Blind Spot
Science and the Crisis of Uncertainty
William Byers

“Is the idea that anything can be determined with absolute certainty an illusion?... Byers incorporates many brilliant thinkers and seminal scientific breakthroughs into his discussion, offering the cogent, invigorating argument that only by embracing uncertainty can we truly progress.”
—Kirkus Reviews

“Science has been under siege during the last quarter century, first by critics who charge that science itself is a cultural construct and that scientists import their own belief systems into their research. Retired math professor Byers (How Mathematicians Think) argues that much of the problem lies in what he calls the ‘science of certainty’.... Instead, Byers says, scientists need to recognize ‘uncertainty, incompleteness, and ambiguity, the ungraspable, the blind spot, or the limits to reason.’”
—Publishers Weekly

The Blind Spot offers an entirely new way of thinking about science, one that highlights its strengths and limitations, its unrealized promise, and, above all, its unavoidable ambiguity. It also points to a more sophisticated approach to the most intractable problems of our time.

William Byers is professor emeritus of mathematics and statistics at Concordia University in Montreal.

NEW PAPERBACK
How Mathematicians Think
Using Ambiguity, Contradiction, and Paradox to Create Mathematics
William Byers

“Ambitious, accessible and provocative…. Everyone should read Byers.”
—Donal O’Shea, Nature

“As William Byers points out in this courageous book, mathematics today is obsessed with rigor, and this actually suppresses creativity…. Byers isn’t content merely to rescue maths. His goals are even higher: he dares to oppose the entire zeitgeist…. Bravo.”
—Gregory Chaitin, New Scientist

“(A) brilliant and easily accessible book on the creative foundations of math and psychology.”
—Ernest Rossi, Psychological Perspectives

“This book is a radically new account of mathematical discourse and mathematical thinking…. [P]rofound, unpretentious, and courageous.”
—Reuben Hersh, Notices of the AMS

On Fact and Fraud
Cautionary Tales from the Front Lines of Science
David Goodstein

“Physicist David Goodstein asks why some scientists are driven to misrepresent results. His book On Fact and Fraud uses well-known cases to look at how science is conducted and to remind us that not all ‘fraudulent’ scientists are guilty.”
—Joanne Baker and Sara Abdulla, Nature

“Goodstein’s book really shines as an insider’s perspective of how science works in the nitty-gritty, hardscrabble, competitive world of professional research.”
—Michael Shermer, American Journal of Physics

Fraud in science is not as easy to identify as one might think. When accusations of scientific misconduct occur, truth can often be elusive, and the cause of a scientist’s ethical misstep isn’t always clear. On Fact and Fraud looks at actual cases in which fraud was committed or alleged, explaining what constitutes scientific misconduct and what doesn’t, and providing readers with the ethical foundations needed to discern and avoid fraud wherever it may arise.

David Goodstein is the Frank J. Gilloon Distinguished Teaching and Service Professor in the Department of Physics at the California Institute of Technology.

2010. 184 pages. 22 halftones.

Reputation and Power
Organizational Image and Pharmaceutical Regulation at the FDA
Daniel Carpenter

“In his massive, magisterial Reputation and Power: Organizational Image and Pharmaceutical Regulation at the FDA, the Harvard political scientist Daniel Carpenter provides both a history of the agency and an analysis of how it gained and flexed its most important regulatory power, the ability to keep new drugs off the market. Carpenter carefully documents the ways FDA bureaucrats have worked to exploit opportunities to expand their influence and reshape how the drug industry and the medical profession operate.”
—Keith E. Wittington, Reason

The U.S. Food and Drug Administration is the most powerful regulatory agency in the world. How did the FDA become so influential? And how exactly does it wield its extraordinary power? Reputation and Power traces the history of FDA regulation of pharmaceuticals, revealing how the agency’s organizational reputation has been the primary source of its power, yet also one of its ultimate constraints.

Daniel Carpenter is the Allie S. Freed Professor of Government at Harvard University.

Explore the great scientific and technological issues afoot in the world today: http://princetonglobalscience.org
The savage and degraded cannibal has played a surprisingly important role in the history of thought. This provocative book is the first to systematically trace the figure of the cannibal in the arguments of Western philosophers, from the classical period to today. Cătălin Avramescu shows how the idea of the cannibal appears in everything from the decline of natural law theories and disputes over the Christian resurrection to the emergence of modernity—and how the cannibal continues to surface in contemporary debates about a wide range of issues, including moral relativism, private property rights, and vegetarianism. Laying bare the darker fears that course through Western thought, An Intellectual History of Cannibalism sheds new light on the birth of modernity and the philosophies of culture that arose in the wake of the Enlightenment.

Cătălin Avramescu is reader in political science at the University of Bucharest and a docent in philosophy at the University of Helsinki.

“[T]his is a remarkable work and there really is no other book like it.”
—Noel Malcolm, Standpoint

Hysteria Complicated by Ecstasy offers a rare window into the inner life of a person ordinarily inaccessible to historians. Jan Goldstein analyzes and translates a previously unpublished manuscript recounting the strange case of eighteen-year-old Nanette Leroux, a French peasant girl who fell ill in 1822 with a variety of incapacitating nervous symptoms. Filled with intimate details about Nanette’s behavior, this early nineteenth-century text is noteworthy for the sexual references that contemporaries did not recognize as such. While hysteria would become a fashionable disease among urban women by the end of the nineteenth century, the case of Nanette Leroux differs sharply from this pattern in its early date and rural setting. Goldstein situates the case in its multiple contexts, examines it from the standpoint of early nineteenth-century medicine, and uses the insights of Foucault and Freud to craft a twenty-first-century interpretation.

Jan Goldstein is the Norman and Edna Freehling Professor of History at the University of Chicago.

Einstein Before Israel
Zionist Icon or Iconoclast?
Ze’ev Rosenkranz

“Ze’ev Rosenkranz’s careful and highly readable exploration of Einstein’s encounters with his Jewish identity opens surprising windows not only into the life and mind of the twentieth century’s most famous scientist, but also into the history of Zionism, the founding of Hebrew University, and the tumultuous history of British Palestine.”
—Michael Gordin, Princeton University

Albert Einstein was initially skeptical and even disdainful of the Zionist movement, yet he affiliated himself with this controversial political ideology and today is widely seen as an outspoken advocate for a modern Jewish homeland in Palestine. What enticed this renowned scientist and humanitarian, who repeatedly condemned nationalism of all forms, to radically change his views? Einstein Before Israel traces Einstein’s involvement with Zionism. Drawing on a wealth of rare archival evidence—much of it never before published—this book offers the most nuanced picture yet of Einstein’s complex and sometimes stormy relationship with Jewish nationalism.

Ze’ev Rosenkranz is senior editor at the Einstein Papers Project at the California Institute of Technology and a former curator of the Albert Einstein Archives at the Hebrew University of Jerusalem.

NEW

With a foreword by Freeman Dyson

The Ultimate Quotable Einstein
Collected and edited by Alice Calaprice

Here is the definitive new edition of the hugely popular collection of Einstein quotations that has sold tens of thousands of copies worldwide and been translated into twenty-five languages.

The Ultimate Quotable Einstein features 400 additional quotes, bringing the total to roughly 1,600 in all. This ultimate edition includes new sections—“On and to Children,” “On Race and Prejudice,” and “Einstein’s Verses: A Small Selection”—as well as a chronology of Einstein’s life and accomplishments, Freeman Dyson’s authoritative foreword, and new commentary by Alice Calaprice.

In The Ultimate Quotable Einstein, readers will also find quotes by others about Einstein along with quotes attributed to him. Every quotation in this informative and entertaining collection is fully documented, and Calaprice has carefully selected new photographs and cartoons to introduce each section.

Alice Calaprice is a renowned expert on Albert Einstein and was a longtime senior editor at Princeton University Press. She has worked on the Collected Papers of Albert Einstein since the founding of the project, has copyedited all the volumes including the translation series, and is the author of several popular books on Einstein.

Cl: 978-0-691-14412-2 $35.00 | £24.95

2010. 608 pages. 27 halftones.
Cl: 978-0-691-13817-6 $24.95 | £16.95
The Collected Papers of Albert Einstein is one of the most ambitious publishing ventures ever undertaken in the documentation of the history of science. Selected from among more than 40,000 documents contained in the personal collection of Albert Einstein (1879-1955), and 15,000 Einstein and Einstein-related documents discovered by the editors since the beginning of the Einstein Project, The Collected Papers will provide the first complete picture of a massive written legacy that ranges from Einstein’s first work on the special and general theories of relativity and the origins of quantum theory, to expressions of his profound concern with civil liberties, education, Zionism, pacifism, and disarmament. The series will contain over 14,000 documents and will fill twenty-five volumes.
