Introduction		xiii
1 Definition of Moduli Problems		1
1.1 Preliminaries in Algebra		1
1.1.1 Lattices and Orders		1
1.1.2 Determinantal Conditions		6
1.1.3 Projective Modules		13
1.1.4 Generalities on Pairings		16
1.1.5 Classification of Pairings by Involutions		21
1.2 Linear Algebraic Data		26
1.2.1 PEL-Type \mathcal{O} -Lattices		26
1.2.2 Torsion of Universal Domains		34
1.2.3 Self-Dual Symplectic Modules		37
1.2.4 Gram–Schmidt Process		47
1.2.5 Reflex Fields		50
1.2.6 Filtrations		55
1.3 Geometric Structures		57
1.3.1 Abelian Schemes and Quasi-Isogenies		57
1.3.2 Polarizations		62
1.3.3 Endomorphism Structures		66
1.3.4 Conditions on Lie Algebras		69
1.3.5 Tate Modules		69
1.3.6 Principal Level Structures		71
1.3.7 General Level Structures		75
1.3.8 Rational Level Structures		76
1.4 Definitions of Moduli Problems		79
1.4.1 Definition by Isomorphism Classes		79
1.4.2 Definition by $\mathbb{Z}_{(\square)}^\times$ -Isogeny Classes		83
1.4.3 Comparison between Two Definitions		84
1.4.4 Definition by Different Sets of Primes		88

2	Representability of Moduli Problems	91
2.1	Theory of Obstructions for Smooth Schemes	92
2.1.1	Preliminaries	92
2.1.2	Deformation of Smooth Schemes	95
2.1.3	Deformation of Morphisms	99
2.1.4	Base Change	101
2.1.5	Deformation of Invertible Sheaves	103
2.1.6	De Rham Cohomology	108
2.1.7	Kodaira–Spencer Morphisms	114
2.2	Formal Theory	117
2.2.1	Local Moduli Functors and Schlessinger’s Criterion	117
2.2.2	Rigidity of Structures	120
2.2.3	Prorepresentability	125
2.2.4	Formal Smoothness	128
2.3	Algebraic Theory	135
2.3.1	Grothendieck’s Formal Existence Theory	135
2.3.2	Effectiveness of Local Moduli	136
2.3.3	Automorphisms of Objects	137
2.3.4	Proof of Representability	137
2.3.5	Properties of Kodaira–Spencer Morphisms	139
3	Structures of Semi-Abelian Schemes	143
3.1	Groups of Multiplicative Type, Tori, and Their Torsors	143
3.1.1	Groups of Multiplicative Type	143
3.1.2	Torsors and Invertible Sheaves	144
3.1.3	Construction Using Sheaves of Algebras	148
3.1.4	Group Structures on Torsors	151
3.1.5	Group Extensions	154
3.2	Biextensions and Cubical Structures	155
3.2.1	Biextensions	155
3.2.2	Cubical Structures	157
3.2.3	Fundamental Example	158
3.2.4	The Group $\mathcal{G}(\mathcal{L})$ for Abelian Schemes	159
3.2.5	Descending Structures	160
3.3	Semi-Abelian Schemes	161
3.3.1	Generalities	161
3.3.2	Extending Structures	163
3.3.3	Raynaud Extensions	165
3.4	The Group $K(\mathcal{L})$ and Applications	167
3.4.1	Quasi-Finite Subgroups of Semi-Abelian Schemes over Henselian Bases	167
3.4.2	Statement of the Theorem on the Group $K(\mathcal{L})$	169
3.4.3	Dual Semi-Abelian Schemes	171
3.4.4	Dual Raynaud Extensions	172

4	Theory of Degeneration for Polarized Abelian Schemes	175
4.1	The Setting for This Chapter	175
4.2	Ample Degeneration Data	175
4.2.1	Main Definitions and Main Theorem of Degeneration . . .	176
4.2.2	Equivalence between ι and τ	181
4.2.3	Equivalence between ψ and Actions on $\mathcal{L}_\eta^{\natural}$	184
4.2.4	Equivalence between the Positivity Condition for ψ and the Positivity Condition for τ	189
4.3	Fourier Expansions of Theta Functions	190
4.3.1	Definition of ψ and τ	190
4.3.2	Relations between Theta Representations	197
4.3.3	Addition Formulas	202
4.3.4	Dependence of τ on the Choice of \mathcal{L}	208
4.4	Equivalences of Categories	211
4.5	Mumford's Construction	215
4.5.1	Relatively Complete Models	216
4.5.2	Construction of the Quotient	226
4.5.3	Functoriality	234
4.5.4	Equivalences and Polarizations	242
4.5.5	Dependence of τ on the Choice of \mathcal{L} , Revisited	254
4.5.6	Two-Step Degenerations	257
4.6	Kodaira–Spencer Morphisms	262
4.6.1	Definition for Semi-Abelian Schemes	262
4.6.2	Definition for Periods	265
4.6.3	Compatibility with Mumford's Construction	270
5	Degeneration Data for Additional Structures	285
5.1	Data without Level Structures	285
5.1.1	Data for Endomorphism Structures	285
5.1.2	Data for Lie Algebra Conditions	287
5.2	Data for Principal Level Structures	292
5.2.1	The Setting for This Section	292
5.2.2	Analysis of Principal Level Structures	293
5.2.3	Analysis of Splittings for $G[n]_\eta$	305
5.2.4	Weil Pairings in General	314
5.2.5	Splittings of $G[n]_\eta$ in Terms of Sheaves of Algebras . . .	320
5.2.6	Weil Pairings for $G[n]_\eta$ via Splittings	326
5.2.7	Construction of Principal Level Structures	337
5.3	Data for General PEL-Structures	345
5.3.1	Formation of Étale Orbits	345
5.3.2	Degenerating Families	353
5.3.3	Criterion for Properness	354
5.4	Notion of Cusp Labels	355
5.4.1	Principal Cusp Labels	355

5.4.2	General Cusp Labels	361
5.4.3	Hecke Actions on Cusp Labels	364
6	Algebraic Constructions of Toroidal Compactifications	373
6.1	Review of Toroidal Embeddings	373
6.1.1	Rational Polyhedral Cone Decompositions	373
6.1.2	Toroidal Embeddings of Torsors	375
6.2	Construction of Boundary Charts	376
6.2.1	The Setting for This Section	376
6.2.2	Construction without the Positivity Condition or Level Structures	378
6.2.3	Construction with Principal Level Structures	384
6.2.4	Construction with General Level Structures	397
6.2.5	Construction with the Positivity Condition	400
6.2.6	Identifications between Parameter Spaces	409
6.3	Approximation and Gluing	411
6.3.1	Good Formal Models	411
6.3.2	Good Algebraic Models	420
6.3.3	Étale Presentation and Gluing	427
6.4	Arithmetic Toroidal Compactifications	437
6.4.1	Main Results on Toroidal Compactifications	437
6.4.2	Towers of Toroidal Compactifications	441
6.4.3	Hecke Actions on Toroidal Compactifications	444
7	Algebraic Constructions of Minimal Compactifications	447
7.1	Automorphic Forms and Fourier–Jacobi Expansions	447
7.1.1	Automorphic Forms of Naive Parallel Weights	447
7.1.2	Fourier–Jacobi Expansions	449
7.2	Arithmetic Minimal Compactifications	454
7.2.1	Positivity of Hodge Invertible Sheaves	454
7.2.2	Stein Factorizations and Finite Generation	455
7.2.3	Main Construction of Minimal Compactification	458
7.2.4	Main Results on Minimal Compactifications	464
7.2.5	Hecke Actions on Minimal Compactifications	472
7.3	Projectivity of Toroidal Compactifications	474
7.3.1	Convexity Conditions on Cone Decompositions	474
7.3.2	Generalities on Normalizations of Blowups	477
7.3.3	Main Result on Projectivity of Toroidal Compactifications	478
A	Algebraic Spaces and Algebraic Stacks	487
A.1	Some Category Theory	487
A.1.1	A Set-Theoretical Remark	487
A.1.2	2-Categories and 2-Functors	488
A.2	Grothendieck Topologies	491

A.3	Properties Stable in the Étale Topology of Schemes	493
A.4	Algebraic Spaces	494
A.4.1	Quotients of Equivalence Relations	495
A.4.2	Properties of Algebraic Spaces	497
A.4.3	Quasi-Coherent Sheaves on Algebraic Spaces	499
A.4.4	Points and the Zariski Topology of Algebraic Spaces . . .	499
A.5	Categories Fibered in Groupoids	500
A.5.1	Quotients of Groupoid Spaces	503
A.6	Stacks	505
A.7	Algebraic Stacks	509
A.7.1	Quotients of Étale Groupoid Spaces	510
A.7.2	Properties of Algebraic Stacks	511
A.7.3	Quasi-Coherent Sheaves on Algebraic Stacks	514
A.7.4	Points and the Zariski Topology of Algebraic Stacks . . .	515
A.7.5	Coarse Moduli Spaces	516
B	Deformations and Artin’s Criterion	519
B.1	Infinitesimal Deformations	519
B.1.1	Structures of Complete Local Rings	521
B.2	Existence of Algebraization	524
B.2.1	Generalization from Sets to Groupoids	524
B.3	Artin’s Criterion for Algebraic Stacks	527
	Bibliography	535
	Index	545
