PREFACE	XI
Chapter 1 The Number One	1
Sliced Origami	1
Fibonacci Numbers and the Golden Ratio	2
Representing Numbers Uniquely	5
Factoring Knots	6
Counting and the Stern Sequence	8
Fractals	10
Gilbreath's Conjecture	13
Benford's Law	13
The Brouwer Fixed-Point Theorem	16
Inverse Problems	17
Perfect Squares	19
The Bohr–Mollerup Theorem	19
The Picard Theorems	21
Chapter 2 The Number Two	24
The Jordan Curve Theorem and Parity Arguments	24
Aspect Ratio	26
How Symmetric Are You?	27

The Pythagorean Theorem	29
Beatty Sequences	32
Euler's Formula	33
Matters of Prime Importance	34
The Ham Sandwich Theorem	38
Power Sets and Powers of Two	39
The Sylvester–Gallai Theorem	42
Formulas for $\pi$	43
Multiplication	44
The Thue–Morse Sequence	45
Duals	48
Apollonian Circle Packings	51
Perfect Numbers and Mersenne Primes	53
Pythagorean Tuning and the Square Root of 2	54
Inverse Square Laws	56
The Arithmetic–Geometric Mean Inequality	57
Positive Polynomials	59
Newton's Method for Root Finding	60
More Division via Multiplication	63
The Allure of $\pi^2/6$	64
Jacobian Conjectures	66
Chapter 3 The Number Three	69
The $3x + 1$ Problem	69
Triangular Numbers and Bulgarian Solitaire	71
Rock–Paper–Scissors and Borromean Rings	73
Random Walks	74
Trisecting an Angle	77
The Three-Body Problem	78
The Lorenz Attractor and Chaos	81
Period Three Implies Chaos	83
Patterns among the Stars	85
Fermat's Last Theorem	86
Leftovers Anyone?	89
Egyptian Fractions	90
Arrow's Impossibility Theorem	93

Mapping Surfaces	95
Guarding an Art Gallery	96
The Poincaré Conjecture	97
Monge's Three-Circle Theorem	100
Marden's Theorem	100
The Reuleaux Triangle	103
The Third Critical Point	106
Sums of Cubes	108
Approximating Decay	109
Chapter 4 The Number Four	111
The Four Color Theorem	111
The Tennis Ball Theorem	114
Sum of Squares Identities	114
Rearranging Four Pieces	115
Ducci Sequences	116
Euler's Sum of Powers Conjecture	119
Villarceau Circles	122
The Inscribed Square Problem	123
Regular Polygons on a Computer Screen	124
The Four Travelers Problem	125
The Four Exponentials Conjecture	127
Concentric Quadrilaterals	129
The Four Hats Problem	131
Chapter 5 The Number Five	132
The Miquel Five Circles Theorem	132
The Platonic Solids	133
Solving Polynomial Equations	134
Diophantine Approximation	137
The Petersen Graph	138
The Happy Ending Problem	140
Tessellations	141
Of Balls and Sausages	143
Knight's Tours on Rectangular Boards	145
Magic with Five Cards	145

Soccer Balls and Domes	148
Recycling ad Infinitum	148
The Rogers–Ramanujan Identities	150
Chapter 6 The Number Six	156
Optimal Packing	156
Of Friends and Strangers	161
Six Degrees of Separation	161
A Necklace of Spheres	163
Hexagons in Pascal’s Triangle	164
The Game of Hex	165
The Wendt Determinant	167
Six Lengths in Geometry	168
Chapter 7 The Number Seven	170
The Seven Circles Theorem	170
Digits of $1/7$ and Ellipses	171
Strassen’s Matrix Multiplication	173
The Fano Plane	175
Border Patterns	177
The Szilassi Polyhedron and the Heawood Graph	178
The Kuratowski Closure–Complement Theorem	179
Can You Hear the Shape of a Drum?	182
Barker Codes	184
Recreational Mathematics	186
Experiments with Integrals	188
Chapter 8 The Number Eight	191
The Pizza Theorem	191
Shuffling Cards	192
The Game of Life	193
Repetition in Pascal’s Triangle	196
The Sierpiński Carpet	197
Quaternions and Octonions	198
The Summit of $E_8$	202

Chapter 9	The Number Nine	205
	Nine Points and Collinearity	205
	Casting Out Nines	207
	Primes and Nines	208
	The Fifteen Theorem	209
	Circle Packings with Two Sizes	210
	Catalan's Conjecture	211
	The Heegner Numbers	213
Chapter 10	Solutions	216
	Rearranging Four Pieces (Chapter 4)	216
	The Four Hats Problem (Chapter 4)	216
	The Kuratowski Closure–Complement Theorem (Chapter 7)	217
	Recreational Mathematics (Chapter 7)	217
	FURTHER READING	219
	CREDITS FOR ILLUSTRATIONS	223
	INDEX	225
