<i>Preface</i>	ix	II.25 Markov Chains	116
<i>Contributors</i>	xiii	II.26 Model Reduction	117
<hr/>			
Part I Introduction to Applied Mathematics			
I.1 What Is Applied Mathematics?	1	II.27 Multiscale Modeling	119
I.2 The Language of Applied Mathematics	8	II.28 Nonlinear Equations and Newton's Method	120
I.3 Methods of Solution	27	II.29 Orthogonal Polynomials	122
I.4 Algorithms	40	II.30 Shocks	122
I.5 Goals of Applied Mathematical Research	48	II.31 Singularities	124
I.6 The History of Applied Mathematics	55	II.32 The Singular Value Decomposition	126
<hr/>			
Part II Concepts			
II.1 Asymptotics	81	II.33 Tensors and Manifolds	127
II.2 Boundary Layer	82	II.34 Uncertainty Quantification	131
II.3 Chaos and Ergodicity	82	II.35 Variational Principle	134
II.4 Complex Systems	83	II.36 Wave Phenomena	134
II.5 Conformal Mapping	84	<hr/>	
II.6 Conservation Laws	86	Part III Equations, Laws, and Functions of Applied Mathematics	
II.7 Control	88	III.1 Benford's Law	135
II.8 Convexity	89	III.2 Bessel Functions	137
II.9 Dimensional Analysis and Scaling	90	III.3 The Black-Scholes Equation	137
II.10 The Fast Fourier Transform	94	III.4 The Burgers Equation	138
II.11 Finite Differences	95	III.5 The Cahn-Hilliard Equation	138
II.12 The Finite-Element Method	96	III.6 The Cauchy-Riemann Equations	139
II.13 Floating-Point Arithmetic	96	III.7 The Delta Function and Generalized Functions	139
II.14 Functions of Matrices	97	III.8 The Diffusion Equation	142
II.15 Function Spaces	99	III.9 The Dirac Equation	142
II.16 Graph Theory	101	III.10 Einstein's Field Equations	144
II.17 Homogenization	103	III.11 The Euler Equations	146
II.18 Hybrid Systems	103	III.12 The Euler-Lagrange Equations	147
II.19 Integral Transforms and Convolution	104	III.13 The Gamma Function	148
II.20 Interval Analysis	105	III.14 The Ginzburg-Landau Equation	148
II.21 Invariants and Conservation Laws	106	III.15 Hooke's Law	149
II.22 The Jordan Canonical Form	112	III.16 The Korteweg-de Vries Equation	150
II.23 Krylov Subspaces	113	III.17 The Lambert W Function	151
II.24 The Level Set Method	114	III.18 Laplace's Equation	155
		III.19 The Logistic Equation	156
		III.20 The Lorenz Equations	158
		III.21 Mathieu Functions	159
		III.22 Maxwell's Equations	160

III.23	The Navier–Stokes Equations	162
III.24	The Painlevé Equations	163
III.25	The Riccati Equation	165
III.26	Schrödinger’s Equation	167
III.27	The Shallow-Water Equations	167
III.28	The Sylvester and Lyapunov Equations	168
III.29	The Thin-Film Equation	169
III.30	The Tricomi Equation	170
III.31	The Wave Equation	171

Part IV Areas of Applied Mathematics

IV.1	Complex Analysis	173
IV.2	Ordinary Differential Equations	181
IV.3	Partial Differential Equations	190
IV.4	Integral Equations	200
IV.5	Perturbation Theory and Asymptotics	208
IV.6	Calculus of Variations	218
IV.7	Special Functions	227
IV.8	Spectral Theory	236
IV.9	Approximation Theory	248
IV.10	Numerical Linear Algebra and Matrix Analysis	263
IV.11	Continuous Optimization (Nonlinear and Linear Programming)	281
IV.12	Numerical Solution of Ordinary Differential Equations	293
IV.13	Numerical Solution of Partial Differential Equations	306
IV.14	Applications of Stochastic Analysis	319
IV.15	Inverse Problems	327
IV.16	Computational Science	335
IV.17	Data Mining and Analysis	350
IV.18	Network Analysis	360
IV.19	Classical Mechanics	374
IV.20	Dynamical Systems	383
IV.21	Bifurcation Theory	393
IV.22	Symmetry in Applied Mathematics	402
IV.23	Quantum Mechanics	411
IV.24	Random-Matrix Theory	419
IV.25	Kinetic Theory	428
IV.26	Continuum Mechanics	446
IV.27	Pattern Formation	458
IV.28	Fluid Dynamics	467
IV.29	Magnetohydrodynamics	476
IV.30	Earth System Dynamics	485
IV.31	Effective Medium Theories	500
IV.32	Mechanics of Solids	505
IV.33	Soft Matter	516
IV.34	Control Theory	523
IV.35	Signal Processing	533

IV.36	Information Theory	545
IV.37	Applied Combinatorics and Graph Theory	552
IV.38	Combinatorial Optimization	564
IV.39	Algebraic Geometry	570
IV.40	General Relativity and Cosmology	579

Part V Modeling

V.1	The Mathematics of Adaptation (Or the Ten Avatars of Vishnu)	591
V.2	Sport	598
V.3	Inerters	604
V.4	Mathematical Biomechanics	609
V.5	Mathematical Physiology	616
V.6	Cardiac Modeling	623
V.7	Chemical Reactions	627
V.8	Divergent Series: Taming the Tails	634
V.9	Financial Mathematics	640
V.10	Portfolio Theory	648
V.11	Bayesian Inference in Applied Mathematics	658
V.12	A Symmetric Framework with Many Applications	661
V.13	Granular Flows	665
V.14	Modern Optics	673
V.15	Numerical Relativity	680
V.16	The Spread of Infectious Diseases	687
V.17	The Mathematics of Sea Ice	694
V.18	Numerical Weather Prediction	705
V.19	Tsunami Modeling	712
V.20	Shock Waves	720
V.21	Turbulence	724

Part VI Example Problems

VI.1	Cloaking	733
VI.2	Bubbles	735
VI.3	Foams	737
VI.4	Inverted Pendulums	741
VI.5	Insect Flight	743
VI.6	The Flight of a Golf Ball	746
VI.7	Automatic Differentiation	749
VI.8	Knotting and Linking of Macromolecules	752
VI.9	Ranking Web Pages	755
VI.10	Searching a Graph	757
VI.11	Evaluating Elementary Functions	759
VI.12	Random Number Generation	761
VI.13	Optimal Sensor Location in the Control of Energy-Efficient Buildings	763
VI.14	Robotics	767
VI.15	Slipping, Sliding, Rattling, and Impact: Nonsmooth Dynamics and Its Applications	769

VI.16	From the N -Body Problem to Astronomy and Dark Matter	771
VI.17	The N -Body Problem and the Fast Multipole Method	775
VI.18	The Traveling Salesman Problem	778

VII.19	Airport Baggage Screening with X-Ray Tomography	866
VII.20	Mathematical Economics	868
VII.21	Mathematical Neuroscience	873
VII.22	Systems Biology	879
VII.23	Communication Networks	883
VII.24	Text Mining	887
VII.25	Voting Systems	891

Part VII Application Areas

VII.1	Aircraft Noise	783
VII.2	A Hybrid Symbolic-Numeric Approach to Geometry Processing and Modeling	787
VII.3	Computer-Aided Proofs via Interval Analysis	790
VII.4	Applications of Max-Plus Algebra	795
VII.5	Evolving Social Networks, Attitudes, and Beliefs—and Counterterrorism	800
VII.6	Chip Design	804
VII.7	Color Spaces and Digital Imaging	808
VII.8	Mathematical Image Processing	813
VII.9	Medical Imaging	816
VII.10	Compressed Sensing	823
VII.11	Programming Languages: An Applied Mathematics View	828
VII.12	High-Performance Computing	839
VII.13	Visualization	843
VII.14	Electronic Structure Calculations (Solid State Physics)	847
VII.15	Flame Propagation	852
VII.16	Imaging the Earth Using Green's Theorem	857
VII.17	Radar Imaging	860
VII.18	Modeling a Pregnancy Testing Kit	864

Part VIII Final Perspectives

VIII.1	Mathematical Writing	897
VIII.2	How to Read and Understand a Paper	903
VIII.3	How to Write a General Interest Mathematics Book	906
VIII.4	Workflow	912
VIII.5	Reproducible Research in the Mathematical Sciences	916
VIII.6	Experimental Applied Mathematics	925
VIII.7	Teaching Applied Mathematics	933
VIII.8	Mediated Mathematics: Representations of Mathematics in Popular Culture and Why These Matter	943
VIII.9	Mathematics and Policy	953
