Foreword	ix
Chapter I. Representations of the fundamental group and the torsor of deformations. An overview	1
by AHMED ABBES AND MICHEL GROS	
I.1 Introduction	1
I.2 Notation and conventions	3
I.3 Small generalized representations	5
I.4 The torsor of deformations	6
I.5 Faltings ringed topos	13
I.6 Dolbeault modules	19
Chapter II. Representations of the fundamental group and the torsor of deformations. Local study	27
by AHMED ABBES AND MICHEL GROS	
II.1 Introduction	27
II.2 Notation and conventions	28
II.3 Results on continuous cohomology of profinite groups	35
II.4 Objects with group actions	50
II.5 Logarithmic geometry lexicon	63
II.6 Faltings' almost purity theorem	71
II.7 Faltings extension	84
II.8 Galois cohomology	98
II.9 Fontaine p -adic infinitesimal thickenings	110
II.10 Higgs–Tate torsors and algebras	120
II.11 Galois cohomology II	132
II.12 Dolbeault representations	143
II.13 Small representations	153
II.14 Descent of small representations and applications	166
II.15 Hodge–Tate representations	175
Chapter III. Representations of the fundamental group and the torsor of deformations. Global aspects	179
by AHMED ABBES AND MICHEL GROS	
III.1 Introduction	179
III.2 Notation and conventions	180
III.3 Locally irreducible schemes	184
III.4 Adequate logarithmic schemes	185
III.5 Variations on the Koszul complex	190
III.6 Additive categories up to isogeny	194
III.7 Inverse systems of a topos	203
III.8 Faltings ringed topos	211

III.9	Faltings topos over a trait	222
III.10	Higgs–Tate algebras	229
III.11	Cohomological computations	250
III.12	Dolbeault modules	266
III.13	Dolbeault modules on a small affine scheme	284
III.14	Inverse image of a Dolbeault module under an étale morphism	290
III.15	Fibered category of Dolbeault modules	299
Chapter IV. Cohomology of Higgs isocrystals		307
by TAKESHI TSUJI		
IV.1	Introduction	307
IV.2	Higgs envelopes	313
IV.3	Higgs isocrystals and Higgs crystals	350
IV.4	Cohomology of Higgs isocrystals	369
IV.5	Representations of the fundamental group	383
IV.6	Comparison with Faltings cohomology	402
Chapter V. Almost étale coverings		449
by TAKESHI TSUJI		
V.1	Introduction	449
V.2	Almost isomorphisms	450
V.3	Almost finitely generated projective modules	452
V.4	Trace	453
V.5	Rank and determinant	455
V.6	Almost flat modules and almost faithfully flat modules	459
V.7	Almost étale coverings	461
V.8	Almost faithfully flat descent I	464
V.9	Almost faithfully flat descent II	467
V.10	Liftings	471
V.11	Group cohomology of discrete A - G -modules	478
V.12	Galois cohomology	481
Chapter VI. Covanishing topos and generalizations		485
by AHMED ABBES AND MICHEL GROS		
VI.1	Introduction	485
VI.2	Notation and conventions	493
VI.3	Oriented products of topos	494
VI.4	Covanishing topos	502
VI.5	Generalized covanishing topos	511
VI.6	Morphisms with values in a generalized covanishing topos	527
VI.7	Ringed total topos	532
VI.8	Ringed covanishing topos	537
VI.9	Finite étale site and topos of a scheme	542
VI.10	Faltings site and topos	550
VI.11	Inverse limit of Faltings topos	570
Facsimile : A p-adic Simpson correspondence		577
