Preface	xv
1 Introduction	1
1.1 Calculus of Variations, PDEs and Quasiconformal Mappings . . .	2
1.2 Degeneracy	6
1.3 Holomorphic Dynamical Systems	8
1.4 Elliptic Operators and the Beurling Transform	9
2 A Background in Conformal Geometry	12
2.1 Matrix Fields and Conformal Structures	12
2.2 The Hyperbolic Metric	15
2.3 The Space $\mathbf{S}(2)$	17
2.4 The Linear Distortion	21
2.5 Quasiconformal Mappings	22
2.6 Radial Stretchings	28
2.7 Hausdorff Dimension	30
2.8 Degree and Jacobian	32
2.9 A Background in Complex Analysis	34
2.9.1 Analysis with Complex Notation	34
2.9.2 Riemann Mapping Theorem and Uniformization	36
2.9.3 Schwarz-Pick Lemma of Ahlfors	37
2.9.4 Normal Families and Montel's Theorem	39
2.9.5 Hurwitz's Theorem	40
2.9.6 Bloch's Theorem	40
2.9.7 The Argument Principle	41
2.10 Distortion by Conformal Mapping	41
2.10.1 The Area Formula	41
2.10.2 Koebe $\frac{1}{4}$ -Theorem and Distortion Theorem	44
3 The Foundations of Quasiconformal Mappings	48
3.1 Basic Properties	48
3.2 Quasisymmetry	49
3.3 The Gehring-Lehto Theorem	51
3.3.1 The Differentiability of Open Mappings	52

3.4	Quasisymmetric Maps Are Quasiconformal	58
3.5	Global Quasiconformal Maps Are Quasisymmetric	64
3.6	Quasiconformality and Quasisymmetry: Local Equivalence	70
3.7	Lusin's Condition \mathcal{N} and Positivity of the Jacobian	72
3.8	Change of Variables	76
3.9	Quasisymmetry and Equicontinuity	78
3.10	Hölder Regularity	80
3.11	Quasisymmetry and δ -Monotone Mappings	83
4	Complex Potentials	92
4.1	The Fourier Transform	98
4.1.1	The Fourier Transform in L^1 and L^2	99
4.1.2	Fourier Transform on Measures	100
4.1.3	Multipliers	100
4.1.4	The Hecke Identities	101
4.2	The Complex Riesz Transforms R^k	102
4.2.1	Potentials Associated with R^k	103
4.3	Quantitative Analysis of Complex Potentials	104
4.3.1	The Logarithmic Potential	105
4.3.2	The Cauchy Transform	109
4.4	Maximal Functions and Interpolation	117
4.4.1	Interpolation	117
4.4.2	Maximal Functions	120
4.5	Weak-Type Estimates and L^p -Bounds	124
4.5.1	Weak-Type Estimates for Complex Riesz Transforms	124
4.5.2	Estimates for the Beurling Transform \mathcal{S}	128
4.5.3	Weighted L^p -Theory for \mathcal{S}	130
4.6	BMO and the Beurling Transform	131
4.6.1	Global John-Nirenberg Inequalities	132
4.6.2	Norm Bounds in BMO	134
4.6.3	Orthogonality Properties of \mathcal{S}	135
4.6.4	Proof of the Pointwise Estimates	137
4.6.5	Commutators	143
4.6.6	The Beurling Transform of Characteristic Functions	146
4.7	Hölder Estimates	147
4.7.1	Hölder Bounds for the Beurling Transform	147
4.7.2	The Inhomogeneous Cauchy-Riemann Equation	149
4.8	Beurling Transforms for Boundary Value Problems	150
4.8.1	The Beurling Transform on Domains	151
4.8.2	L^p -Theory	153
4.8.3	Complex Potentials for the Dirichlet Problem	155
4.9	Complex Potentials in Multiply Connected Domains	158

5	The Measurable Riemann Mapping Theorem: The Existence Theory of Quasiconformal Mappings	161
5.1	The Basic Beltrami Equation	163
5.2	Quasiconformal Mappings with Smooth Beltrami Coefficient . . .	165
5.3	The Measurable Riemann Mapping Theorem	168
5.4	L^p -Estimates and the Critical Interval	172
	5.4.1 The Caccioppoli Inequalities	174
	5.4.2 Weakly Quasiregular Mappings	178
5.5	Stoilow Factorization	178
5.6	Factoring with Small Distortion	184
5.7	Analytic Dependence on Parameters	185
5.8	Extension of Quasisymmetric Mappings of the Real Line	189
	5.8.1 The Douady-Earle Extension	191
	5.8.2 The Beurling-Ahlfors Extension	192
5.9	Reflection	192
5.10	Conformal Welding	193
6	Parameterizing General Linear Elliptic Systems	195
6.1	Stoilow Factorization for General Elliptic Systems	196
6.2	Linear Families of Quasiconformal Mappings	198
6.3	The Reduced Beltrami Equation	202
6.4	Homeomorphic Solutions to Reduced Equations	204
	6.4.1 Fabes-Stroock Theorem	206
7	The Concept of Ellipticity	210
7.1	The Algebraic Concept of Ellipticity	211
7.2	Some Examples of First-Order Equations	213
7.3	General Elliptic First-Order Operators in Two Variables	214
	7.3.1 Complexification	215
	7.3.2 Homotopy Classification	217
	7.3.3 Classification; $n = 1$	217
7.4	Partial Differential Operators with Measurable Coefficients . . .	221
7.5	Quasilinear Operators	222
7.6	Lusin Measurability	223
7.7	Fully Nonlinear Equations	226
7.8	Second-Order Elliptic Systems	231
	7.8.1 Measurable Coefficients	233
8	Solving General Nonlinear First-Order Elliptic Systems	235
8.1	Equations Without Principal Solutions	236
8.2	Existence of Solutions	237
8.3	Proof of Theorem 8.2.1	239
	8.3.1 Step 1: H Continuous, Supported on an Annulus	239
	8.3.2 Step 2: Good Smoothing of H	242
	8.3.3 Step 3: Lusin-Egoroff Convergence	244
	8.3.4 Step 4: Passing to the Limit	246

8.4	Equations with Infinitely Many Principal Solutions	248
8.5	Liouville Theorems	249
8.6	Uniqueness	253
8.6.1	Uniqueness for Normalized Solutions	255
8.7	Lipschitz $H(z, w, \zeta)$	256
9	Nonlinear Riemann Mapping Theorems	259
9.1	Ellipticity and Change of Variables	261
9.2	The Nonlinear Mapping Theorem: Simply Connected Domains	263
9.2.1	Existence	264
9.2.2	Uniqueness	267
9.3	Mappings onto Multiply Connected Schottky Domains	269
9.3.1	Some Preliminaries	271
9.3.2	Proof of the Mapping Theorem 9.3.4	273
10	Conformal Deformations and Beltrami Systems	275
10.1	Quasilinearity of the Beltrami System	275
10.1.1	The Complex Equation	276
10.2	Conformal Equivalence of Riemannian Structures	279
10.3	Group Properties of Solutions	280
10.3.1	Semigroups	283
10.3.2	Sullivan-Tukia Theorem	285
10.3.3	Ellipticity Constants	287
11	A Quasilinear Cauchy Problem	289
11.1	The Nonlinear $\bar{\partial}$ -Equation	289
11.2	A Fixed-Point Theorem	290
11.3	Existence and Uniqueness	291
12	Holomorphic Motions	293
12.1	The λ -Lemma	294
12.2	Two Compelling Examples	296
12.2.1	Limit Sets of Kleinian Groups	296
12.2.2	Julia Sets of Rational Maps	297
12.3	The Extended λ -Lemma	298
12.3.1	Holomorphic Motions and the Cauchy Problem	299
12.3.2	Holomorphic Axiom of Choice	300
12.4	Distortion of Dimension in Holomorphic Motions	306
12.5	Embedding Quasiconformal Mappings in Holomorphic Flows	309
12.6	Distortion Theorems	310
12.7	Deformations of Quasiconformal Mappings	313
13	Higher Integrability	316
13.1	Distortion of Area	317
13.1.1	Initial Bounds for Distortion of Area	318
13.1.2	Weighted Area Distortion	319

13.1.3	An Example	323
13.1.4	General Area Estimates	324
13.2	Higher Integrability	327
13.2.1	Integrability at the Borderline	330
13.2.2	Distortion of Hausdorff Dimension	332
13.3	The Dimension of Quasicircles	333
13.3.1	Symmetrization of Beltrami Coefficients	336
13.3.2	Distortion of Dimension	338
13.4	Quasiconformal Mappings and BMO	343
13.4.1	Quasiconformal Jacobians and A_p -Weights	345
13.5	Painlevé's Theorem: Removable Singularities	347
13.5.1	Distortion of Hausdorff Measure	351
13.6	Examples of Nonremovable Sets	357
14	L^p-Theory of Beltrami Operators	362
14.1	Spectral Bounds and Linear Beltrami Operators	365
14.2	Invertibility of the Beltrami Operators	366
14.2.1	Proof of Invertibility; Theorem 14.0.4	368
14.3	Determining the Critical Interval	369
14.4	Injectivity in the Borderline Cases	373
14.4.1	Failure of Factorization in $W^{1,q}$	376
14.4.2	Injectivity and Liouville-Type Theorems	378
14.5	Beltrami Operators; Coefficients in VMO	382
14.6	Bounds for the Beurling Transform	385
15	Schauder Estimates for Beltrami Operators	389
15.1	Examples	390
15.2	The Beltrami Equation with Constant Coefficients	391
15.3	A Partition of Unity	392
15.4	An Interpolation	394
15.5	Hölder Regularity for Variable Coefficients	395
15.6	Hölder-Caccioppoli Estimates	398
15.7	Quasilinear Equations	400
16	Applications to Partial Differential Equations	403
16.1	The Hodge $*$ Method	404
16.1.1	Equations of Divergence Type: The A -Harmonic Operator	405
16.1.2	The Natural Domain of Definition	406
16.1.3	The A -Harmonic Conjugate Function	408
16.1.4	Regularity of Solutions	409
16.1.5	General Linear Divergence Equations	411
16.1.6	A -Harmonic Fields	414
16.2	Topological Properties of Solutions	418
16.3	The Hodographic Method	420
16.3.1	The Continuity Equation	420

16.3.2	The p -Harmonic Operator $\operatorname{div} \nabla ^{p-2}\nabla$	423
16.3.3	Second-Order Derivatives	424
16.3.4	The Complex Gradient	427
16.3.5	Hodograph Transform for the p -Laplacian	430
16.3.6	Sharp Hölder Regularity for p -Harmonic Functions	431
16.3.7	Removing the Rough Regularity in the Gradient	432
16.4	The Nonlinear \mathcal{A} -Harmonic Equation	433
16.4.1	δ -Monotonicity of the Structural Field	435
16.4.2	The Dirichlet Problem	441
16.4.3	Quasiregular Gradient Fields and $C^{1,\alpha}$ -Regularity	445
16.5	Boundary Value Problems	449
16.5.1	A Nonlinear Riemann-Hilbert Problem	452
16.6	G -Compactness of Beltrami Differential Operators	456
16.6.1	G -Convergence of the Operators $\partial_{\bar{z}} - \mu_j \partial_z$	457
16.6.2	G -Limits and the Weak*-Topology	459
16.6.3	The Jump from $\partial_{\bar{z}} - \nu \bar{\partial}_z$ to $\partial_{\bar{z}} - \mu \partial_z$	461
16.6.4	The Adjacent Operator's Two Primary Solutions	462
16.6.5	The Independence of $\Phi_z(z)$ and $\Psi_z(z)$	463
16.6.6	Linear Families of Quasiregular Mappings	464
16.6.7	G -Compactness for Beltrami Operators	467
17	PDEs Not of Divergence Type: Pucci's Conjecture	472
17.1	Reduction to a First-Order System	475
17.2	Second-Order Caccioppoli Estimates	476
17.3	The Maximum Principle and Pucci's Conjecture	478
17.4	Interior Regularity	481
17.5	Equations with Lower-Order Terms	483
17.5.1	The Dirichlet Problem	486
17.6	Pucci's Example	488
18	Quasiconformal Methods in Impedance Tomography:	
	Calderón's Problem	490
18.1	Complex Geometric Optics Solutions	493
18.2	The Hilbert Transform \mathcal{H}_σ	495
18.3	Dependence on Parameters	497
18.4	Nonlinear Fourier Transform	499
18.5	Argument Principle	502
18.6	Subexponential Growth	504
18.7	The Solution to Calderón's Problem	510
19	Integral Estimates for the Jacobian	514
19.1	The Fundamental Inequality for the Jacobian	514
19.2	Rank-One Convexity and Quasiconvexity	518
19.2.1	Burkholder's Theorem	521
19.3	L^1 -Integrability of the Jacobian	523

20 Solving the Beltrami Equation: Degenerate Elliptic Case	527
20.1 Mappings of Finite Distortion; Continuity	529
20.1.1 Topological Monotonicity	530
20.1.2 Proof of Continuity in $W^{1,2}$	534
20.2 Integrable Distortion; $W^{1,2}$ -Solutions and Their Properties	534
20.3 A Critical Example	540
20.4 Distortion in the Exponential Class	543
20.4.1 Example: Regularity in Exponential Distortion	543
20.4.2 Beltrami Operators for Degenerate Equations	545
20.4.3 Decay of the Neumann Series	549
20.4.4 Existence Above the Critical Exponent	554
20.4.5 Exponential Distortion: Existence of Solutions	557
20.4.6 Optimal Regularity	560
20.4.7 Uniqueness of Principal Solutions	563
20.4.8 Stoilow Factorization	564
20.4.9 Failure of Factorization in $W^{1,q}$ When $q < 2$	567
20.5 Optimal Orlicz Conditions for the Distortion Function	570
20.6 Global Solutions	576
20.6.1 Solutions on \mathbb{C}	576
20.6.2 Solutions on $\hat{\mathbb{C}}$	578
20.7 A Liouville Theorem	579
20.8 Applications to Degenerate PDEs	580
20.9 Lehto's Condition	581
21 Aspects of the Calculus of Variations	586
21.1 Minimizing Mean Distortion	586
21.1.1 Formulation of the General Problem	588
21.1.2 The L^1 -Grötzsch Problem	588
21.1.3 Sublinear Growth: Failure of Minimization	591
21.1.4 Inverses of Homeomorphisms of Integrable Distortion	592
21.1.5 The Traces of Mappings with Integrable Distortion	595
21.2 Variational Equations	599
21.2.1 The Lagrange-Euler Equations	601
21.2.2 Equations for the Inverse Map	604
21.3 Mean Distortion, Annuli and the Nitsche Conjecture	606
21.3.1 Polar Coordinates	611
21.3.2 Free Lagrangians	612
21.3.3 Lower Bounds by Free Lagrangians	613
21.3.4 Weighted Mean Distortion	615
21.3.5 Minimizers within the Nitsche Range	616
21.3.6 Beyond the Nitsche Bound	618
21.3.7 The Minimizing Sequence and Its BV-limit	619
21.3.8 Correction Lemma	622

Appendix: Elements of Sobolev Theory and Function Spaces	624
A.1 Schwartz Distributions	624
A.2 Definitions of Sobolev Spaces	627
A.3 Mollification	628
A.4 Pointwise Coincidence of Sobolev Functions	630
A.5 Alternate Characterizations	630
A.6 Embedding Theorems	633
A.7 Duals and Compact Embeddings	636
A.8 Hardy Spaces and <i>BMO</i>	637
A.9 Reverse Hölder Inequalities	640
A.10 Variations of Sobolev Mappings	640
Basic Notation	643
Bibliography	647
Index	671
