<i>Preface to the First Edition</i>	xv
<i>Preface to the Second Edition</i>	xix
<i>Convention, Notation, and Units</i>	xxv

## I Part I: Motivation and Foundation

I.1	Who Needs It?	3
I.2	Path Integral Formulation of Quantum Physics	7
I.3	From Mattress to Field	17
I.4	From Field to Particle to Force	26
I.5	Coulomb and Newton: Repulsion and Attraction	32
I.6	Inverse Square Law and the Floating 3-Brane	40
I.7	Feynman Diagrams	43
I.8	Quantizing Canonically	61
I.9	Disturbing the Vacuum	70
I.10	Symmetry	76
I.11	Field Theory in Curved Spacetime	81
I.12	Field Theory Redux	88

## II Part II: Dirac and the Spinor

II.1	The Dirac Equation	93
II.2	Quantizing the Dirac Field	107
II.3	Lorentz Group and Weyl Spinors	114
II.4	Spin-Statistics Connection	120

**xii | Contents**

II.5	Vacuum Energy, Grassmann Integrals, and Feynman Diagrams for Fermions	123
II.6	Electron Scattering and Gauge Invariance	132
II.7	Diagrammatic Proof of Gauge Invariance	144
II.8	Photon-Electron Scattering and Crossing	152

**III | Part III: Renormalization and Gauge Invariance**

III.1	Cutting Off Our Ignorance	161
III.2	Renormalizable versus Nonrenormalizable	169
III.3	Counterterms and Physical Perturbation Theory	173
III.4	Gauge Invariance: A Photon Can Find No Rest	182
III.5	Field Theory without Relativity	190
III.6	The Magnetic Moment of the Electron	194
III.7	Polarizing the Vacuum and Renormalizing the Charge	200
III.8	Becoming Imaginary and Conserving Probability	207

**IV | Part IV: Symmetry and Symmetry Breaking**

IV.1	Symmetry Breaking	223
IV.2	The Pion as a Nambu-Goldstone Boson	231
IV.3	Effective Potential	237
IV.4	Magnetic Monopole	245
IV.5	Nonabelian Gauge Theory	253
IV.6	The Anderson-Higgs Mechanism	263
IV.7	Chiral Anomaly	270

**V | Part V: Field Theory and Collective Phenomena**

V.1	Superfluids	283
V.2	Euclid, Boltzmann, Hawking, and Field Theory at Finite Temperature	287
V.3	Landau-Ginzburg Theory of Critical Phenomena	292
V.4	Superconductivity	295
V.5	Peierls Instability	298
V.6	Solitons	302
V.7	Vortices, Monopoles, and Instantons	306

**VI | Part VI: Field Theory and Condensed Matter**

VI.1	Fractional Statistics, Chern-Simons Term, and Topological Field Theory	315
VI.2	Quantum Hall Fluids	322

VI.3	Duality	331
VI.4	The $\sigma$ Models as Effective Field Theories	340
VI.5	Ferromagnets and Antiferromagnets	344
VI.6	Surface Growth and Field Theory	347
VI.7	Disorder: Replicas and Grassmannian Symmetry	350
VI.8	Renormalization Group Flow as a Natural Concept in High Energy and Condensed Matter Physics	356

## VII Part VII: Grand Unification

VII.1	Quantizing Yang-Mills Theory and Lattice Gauge Theory	371
VII.2	Electroweak Unification	379
VII.3	Quantum Chromodynamics	385
VII.4	Large $N$ Expansion	394
VII.5	Grand Unification	407
VII.6	Protons Are Not Forever	413
VII.7	$SO(10)$ Unification	421

## VIII Part VIII: Gravity and Beyond

VIII.1	Gravity as a Field Theory and the Kaluza-Klein Picture	433
VIII.2	The Cosmological Constant Problem and the Cosmic Coincidence Problems	448
VIII.3	Effective Field Theory Approach to Understanding Nature	452
VIII.4	Supersymmetry: A Very Brief Introduction	461
VIII.5	A Glimpse of String Theory as a 2-Dimensional Field Theory	469
	<i>Closing Words</i>	473

## N Part N

N.1	Gravitational Waves and Effective Field Theory	479
N.2	Gluon Scattering in Pure Yang-Mills Theory	483
N.3	Subterranean Connections in Gauge Theories	497
N.4	Is Einstein Gravity Secretly the Square of Yang-Mills Theory?	513
	<i>More Closing Words</i>	521
	Appendix A: Gaussian Integration and the Central Identity of Quantum Field Theory	523
	Appendix B: A Brief Review of Group Theory	525

**xiv | Contents**

Appendix C: Feynman Rules	534
Appendix D: Various Identities and Feynman Integrals	538
Appendix E: Dotted and Undotted Indices and the Majorana Spinor	541
<i>Solutions to Selected Exercises</i>	545
<i>Further Reading</i>	559
<i>Index</i>	563
