The Biodiversity Gardener

Over the past decade, wildlife author and photographer Paul Sterry has nurtured, both through action and by doing nothing, what has become a small island of flourishing biodiversity in the half-acre garden that surrounds his north Hampshire cottage. By giving nature a free hand, and fostering habitats appropriate to this part of southeast England, he has enabled an abundance of native plant and animal species to call the garden home. This contrasts with the continued decline in biodiversity in the surrounding countryside. In this inspiring and informative book, Sterry tells the story of his own experiences in biodiversity gardening and offers detailed practical advice to anyone who wants to give nature the upper hand on their own bit of land, no matter how small.

Sterry explains the ecological imperative of adopting a habitat-driven and evidence-based approach. Collectively, biodiversity gardens could leave a lasting legacy—wildlife oases from which future generations stand a fighting chance of restoring Britain’s natural heritage. The book encourages and empowers readers to create their own biological inheritance for posterity—and shows them how they can do it.

Paul Sterry is a bestselling wildlife author and photographer.

Edible Fungi of Britain and Northern Europe

In this beautifully illustrated introductory guide, Jens Petersen shows how to successfully identify and forage for edible mushrooms, and then how to prepare them for the table to ensure a delicious culinary experience, even if you're a first-time forager. Accessible and user-friendly, the book opens with a substantial introduction to fungi—what to look for, where to find them and how to collect and cook them. Other topics include edible and poisonous fungi, conserving mushrooms and other uses of fungi.

Jens Petersen is a mycologist, graphic designer and photographer, and the creator of the online identification tool MycoKey.

A definitive and richly illustrated guide to the botanically unique area of Upper Teesdale in England's County Durham

Teesdale's Special Flora

- Presents the first account to cover together the places, plants and people of this special area
- Features more than 330 stunning photographs
- Includes detailed profiles of 96 plants that make up the Teesdale Assemblage
- Offers a history of Teesdale's botanical exploration and describes the people who live, work and study plants there today
- Provides an overview of environmental threats and what is required to ensure a sustainable future

Margaret E. Bradshaw was awarded an MBE for her services to botany and conservation. Her fount of knowledge and experience is a remarkable gift to those who continue her work.

WildGuides
 February 2023. 288 pages.
 Paper 9780691251332 £14.99

An authoritative two-volume overview of the distribution of the wild plants of Great Britain and Ireland

Plant Atlas 2020

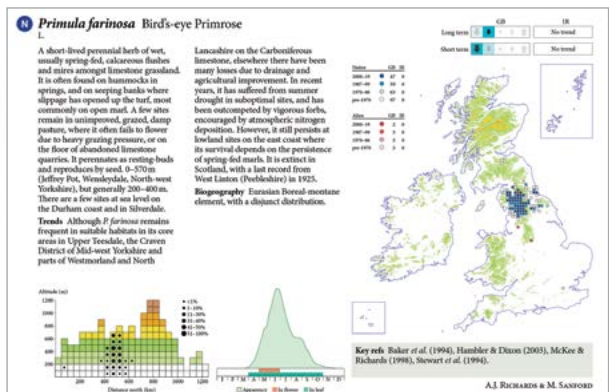

- Provides a detailed assessment of a century of changes to the region’s flora
- Features text, distribution maps and infographics for 2,863 native, alien and hybrid taxa
- Displays the phenology, altitudinal range, and time-series trends for each taxon
- Presents two taxa per page

Plant Atlas 2020 is the most powerful statement ever produced on the state of our wild and naturalised plants. It presents the results of field surveys by the BSBI, building on past atlas surveys undertaken by the Botanical Society in the twentieth century and draws on the work of thousands of botanists who covered the entirety of Britain and Ireland from 2000 to 2019. The Atlas summarises the trends impacting the current state of the British and Irish flora, assessing the changes since the 1950s and analysing the drivers of change, such as habitat loss, pollution and climate change.

P. A. Stroh, K. J. Walker, T. A. Humphrey, O. L. Pescott & R. J. Burckmar

More information about the Plant Atlas 2020 online can be found at plantatlas2020.org.

March 2023. 1528 pages. 20,089 charts & graphs. 15 tables. 2,876 maps. Hardback 9780691247595 £132.00

The Hidden Company That Trees Keep

Trees recruit a host of allies as predators and parasites to defend against uninvited advances from organisms that chew on leaves, drain sap, and bore into wood. Microbial life thrives in the hidden spaces of leaf scales, twigs, and bark, while birds, mammals, and insects benefit from the more visible resources trees provide. In return, animals help with pollination, seed dispersal, and recycling of nutrients. This book blends marvellous storytelling with beautiful illustrations and the latest science to reveal how the lives of trees are intertwined with those of their diverse companions.

James B. Nardi is a research scientist in the School of Integrative Biology at the University of Illinois, Urbana-Champaign.

Nature's Temples

Nature's Temples explores the science and alchemy of old-growth forests and makes a compelling case for their protection. Joan Maloof brings together the scientific data we have about old-growth forests, drawing on diverse fields of study to explain the ecological differences among forests of various ages. This revised and expanded edition also sheds new light on the special role forests play in removing carbon from the atmosphere, and shares what we know about the interplay between wildfires and ancient forests.

Joan Maloof is founder and director of the Old-Growth Forest Network and professor emerita of biological sciences at Salisbury University.

The World Atlas of Trees and Forests

The World Atlas of Trees and Forests offers a beautiful introduction to what forests are, how they work, how they grow, and how we map, assess, and conserve them.

- Provides the most wide-ranging coverage of the world's forests available
- Takes readers beneath the breathtaking variety of wooded canopies that span the globe
- Profiles a wealth of tree species, with enlightening and entertaining natural-history highlights along the way
- Features stunning colour photos, maps, and graphics
- Draws on the latest cutting-edge research and technology, including satellite imagery

Aquatic Plants of Northern and Central Europe including Britain and Ireland

- The first complete guide to the region’s aquatic plants
- Covers all 410 known species, hybrids of ferns, and flowering plants dependent upon freshwater wetlands
- Features 358 illustrated plates, more than 1,400 colour photographs, illustrated keys, distribution maps, detailed descriptions, and much more

Aquatic plants can tell us much about the habitats they live in. This book covers evolution, anatomy, morphology, ecology, and more, as well as guidelines for working with aquatic plants.

Seaweeds of the World

- Features close to 250 beautiful colour photos as well as diagrams and distribution maps
- Covers every major family and genus

Seaweeds are astoundingly diverse. They’re found along the shallows of beaches and have been recorded living at depths of more than 800 feet; they can be microscopic or grow into giants many metres long. They’re incredibly efficient at using the materials found in the ocean and are increasingly used in the human world, in applications from food to fuel. *Seaweeds of the World* makes sense of their complicated world, differentiating between the three main groups—red, green, and brown—and delving into their complex reproductive systems. The result is an unprecedented, accessible, and in-depth look at a previously hidden ocean world.

John Bothwell is a phycologist in the Department of Biosciences at Durham University.

A Guide to Every Family

January 2023, 240 pages, 249 colour + 17 b/w illus, 77 maps.

Hardback 9780691228549 £25.00

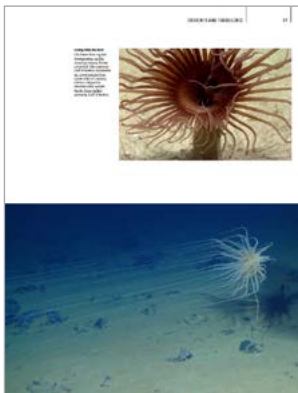

The Deep Ocean

- Features a wealth of breathtaking photos, illustrations, and graphics
- Gives a brief and accessible history of deep-sea exploration
- Covers a marvellous diversity of undersea organisms
- Describes habitats ranging from continental slopes to hydrothermal vents and abyssal plains
- Discusses humanity’s impacts on the deep ocean, from fisheries and whaling to global climate change and acidification
- Written by a team of world-class scientists

Living things in the deep ocean behave in remarkable and surprising ways, and cutting-edge technologies are shedding new light on these critically important ecosystems. This beautifully illustrated book leads you down into the canyons, trenches, and cold seeps of the watery abyss, presenting the deep ocean and its inhabitants as you have never seen them before.

The Lives of Octopuses and Their Relatives

Dive deep into the fascinating world of cephalopods—octopuses, squid, cuttlefish, and the mysterious nautilus—to discover the astonishing diversity of this unique group of intelligent invertebrates and their many roles in the marine ecosystem. Organised by marine habitat, this book features an extraordinary range of these clever and colourful creatures from around the world, and explores their life cycles, behaviour, adaptations, ecology, links to humans, and much more.

Danna Staaf is a science writer and educator with a PhD in marine biology. Her first book, *Squid Empire*, was named one of the best science books of the year by US Radio's *Science Friday*.

Sea Mammals

Annalisa Berta, a leading expert on sea mammals and their evolution, presents an engaging and richly illustrated introduction to past and present species of these remarkable creatures, from the blue whale and the northern fur seal to the extinct giant sperm whale, aquatic sloth, and walking sea cow. The book features more than 50 individual species profiles, themed chapters, stunning photographs, and specially commissioned paleo-illustrations of extinct species. It presents detailed accounts of these mammals' evolutionary path, anatomy, behaviour, habitats, and conservation.

Annalisa Berta is professor emerita of biology at San Diego State University and a specialist in the anatomy and evolutionary biology of marine mammals.

The Bird Name Book

“Hats off to ornithologist Susan Myers on the exhaustive research and colourful writing style that characterise her latest book... Hard to put down.”
—Jim Wright, *The Wryneck*

Myers provides brief biographies of prominent figures in ornithology and interweaves the stories behind the names with quotes from publications dating back to the 1400s, illuminating the shared evolution of language and our relationships with birds, and rooting the names in the history of ornithological discovery.

Susan Myers is a senior leader at WINGS Birding Tours Worldwide and has led birding tours in Asia and other regions for more than 20 years.

2022. 416 pages. 200 colour photos.
Hardback 9780691235691 £35.00

In the Footsteps of Audubon

In the nineteenth century John James Audubon set out to create a complete pictorial record of North American birdlife. Over a period of sixteen years, recording his own journey in journals and hundreds of original paintings, renowned French watercolourist Denis Clavreul followed in the naturalist’s footsteps. This beautiful book brings together some 250 stunning Clavreul watercolours along with illuminating selections from Audubon’s journals and several of his paintings.

Denis Clavreul is a watercolourist, wildlife artist, and biologist whose acclaimed works have been exhibited around the world.
